

PRANVEER SINGH INSTITUTE OF TECHNOLOGY

Major Project Proposal

Team Details:

S No	Full Name	Roll No	Branch & Section	Mob No
1	Priyanshi Singh	2301640130095	IT-B	8005205376
2	Prashant Kumar	2301640130090	IT-B	6387382442
3	Saurabh Vishwakarma	2301640130114	IT-B	8303019581

Project Title: PlaceSmart (Placement Management System)

--

Domain:

1. Belongs to web based Application Development domain	2. Part of EdTech for managing campus placements
3. Uses full stack web technologies	4. Frontend: HTML, CSS, JavaScript (for user interface and interactivity)
5. PHP	6. MySQL
9. Others (Specify if any):	

PRANVEER SINGH INSTITUTE OF TECHNOLOGY

Problem Statement:

In many colleges, the placement process is still managed using manual methods or scattered digital tools such as spreadsheets, emails, and notice boards. This leads to inefficiencies, data inconsistency, and lack of real-time communication between students, placement coordinators, and recruiters. Students often miss important updates regarding job opportunities, eligibility criteria, and interview schedules. Additionally, maintaining and verifying student records becomes time-consuming and prone to errors. Placement officers face challenges in tracking student applications, shortlisting candidates, and generating reports for analysis. The absence of a centralized system also makes it difficult to ensure transparency and proper coordination during placement drives. Therefore, there is a need for a unified and automated system that can streamline the entire placement process, improve communication, and maintain accurate records while reducing manual workload and errors.

Proposed Solution:

In many colleges, the placement process is still managed using manual methods or scattered digital tools such as spreadsheets, emails, and notice boards. This leads to inefficiencies, data inconsistency, and lack of real-time communication between students, placement coordinators, and recruiters. Students often miss important updates regarding job opportunities, eligibility criteria, and interview schedules. Additionally, maintaining and verifying student records becomes time-consuming and prone to errors. Placement officers face challenges in tracking student applications, shortlisting candidates, and generating reports for analysis. The absence of a centralized system also makes it difficult to ensure transparency and proper coordination during placement drives. Therefore, there is a need for a unified and automated system that can streamline the entire placement process, improve communication, and maintain accurate records while reducing manual workload and errors.

Unique/Distinctive feature of the solution:

The proposed system includes smart eligibility filtering that automatically matches students with job criteria, reducing manual effort. It provides a real-time dashboard for tracking applications and placement status. A centralized student profile eliminates repeated data entry, while role-based access ensures secure and organized management. The system also features instant notifications for job updates and interview schedules. Additionally, it prevents duplicate applications and generates automated reports for analysis. These features make the system efficient, transparent, and user-friendly, improving coordination between students, placement officers, and recruiters.

Unlike traditional placement systems that rely on manual processes or basic portals, our solution offers intelligent automation through smart eligibility filtering and real-time updates. It provides a centralized platform with role-based access for students, administrators, and recruiters, ensuring better coordination and data security. The system minimizes redundancy by maintaining a unified student profile and prevents duplicate applications. Additionally, automated report generation and instant notifications enhance efficiency and transparency. Its user-friendly interface and integrated features make it more reliable, scalable, and effective compared to existing fragmented or semi-digital placement management systems.

PRANVEER SINGH INSTITUTE OF TECHNOLOGY

Tools/Technology Uses:

- 1) Hardware Requirements:
 - a) Processor: Intel i5 / AMD Ryzen 5
 - b) RAM: 8 GB or higher
 - c) Storage: 10 GB free space
 - d) Graphics Card: Not required
 - e) Others: Stable internet connection
- 2) Software Requirements:
 - a) Operating System: Windows 10/11
 - b) Development Tools: Visual Studio Code , Node.js , npm / yarn (package manager)
 - c) Database: MongoDB/Superbase
 - d) Web Browser: Google Chrome
 - e) Others: Frontend → Vercel , Backend → Render , Cloud storage (optional): Cloudinary / AWS S3 (for resume storage)
- 3) Others (If any):

(Proposal Evaluation Sheet Should be printed on a Separate Page)
(To be Filled by Faculty/Evaluator)

Proposal Evaluation:

1. Right Identification of the Problem (Appropriate selection of the problem)?
 - a) Excellent b) Good c) Needs Improvement d) Unacceptable
2. Relevance of the Solution (Adequately addressing the problem/need)?
 - a) Excellent b) Good c) Needs Improvement d) Unacceptable
3. Innovativeness in the Solution (Distinctive innovative components/features of the solution)?
 - a) Excellent b) Good c) Needs Improvement d) Unacceptable
4. Uniqueness of the Solution (Intellectual Property Component)?
 - a) Excellent b) Good c) Needs Improvement d) Unacceptable

Improvements/ Suggestions by the Evaluator:

1.	
2.
